Acknowledgments

Many people across Missouri contributed to the development and evolution of this Blueprint and the overall District Continuous Improvement Framework. Special recognition goes to the following partners who have collaboratively helped shape the statewide District Continuous Improvement Framework.

- The Commissioner, Deputy Commissioner, and Assistant Commissioners at the Missouri Department of Elementary and Secondary Education for their vision and leadership
- DESE Division of Learning Services who worked collaboratively to create alignment across offices and to support districts in their efforts to implement effective educational systems
- Directors and Consultants from statewide Regional Professional Development Centers for their ongoing commitment to DCI
- Staff from the Northern Arizona University Institute for Human Development for leadership and ongoing support for the design and development of District Continuous Improvement
- The participating DCI Districts for their willingness to collaborate, share, and inform the future of education for Missouri students

The contents of this framework were developed under a grant from the US Department of Education to the Missouri Department of Elementary and Secondary Education (#H323A170020). However, these contents do not necessarily represent the policy of the US Department of Education, and you should not assume endorsement by the Federal Government.

The Department of Elementary and Secondary Education does not discriminate on the basis of race, color, religion, gender, gender identity, sexual orientation, national origin, age, veteran status, mental or physical disability, or any other basis prohibited by statute in its programs and activities. Inquiries related to department programs and to the location of services, activities, and facilities that are accessible by persons with disabilities may be directed to the Jefferson State Office Building, Director of Civil Rights Compliance and MOA Coordinator (Title VI/Title VII/Title IX/504/ADA/ADAAA/Age Act/GINA/USDA Title VI), 5th Floor, 205 Jefferson Street, P.O. Box 480, Jefferson City, MO 65102-0480; telephone number 573-526-4757 or TTY 800-735-2966; email civilrights@dese.mo.gov.

Personnel from the Institute for Human Development (IHD), at Northern Arizona University, provide training, education, and service for people with disabilities and conduct research focusing on improving educational and disability systems. For over ten years, this team has worked closely with the Missouri Department of Elementary and Secondary Education, Office of Special Education to infuse research into professional development and the statewide system of support. This translation of research into practice occurs through the reciprocal exchange of information, between community members, partner organizations, state agencies, and the IHD. IHD is part of a national network of University Centers for Excellence in Developmental Disabilities (UCEDD).

For definitions of terms used through the Blueprint, see the Glossary of Terms (starting on p. 82) in the Appendix.

*The Glossary of Terms in the Blueprint is one of the most helpful portions of the book as there are times when I need a researched, standard definition of an educational word, term, or acronym.*

*CST Facilitator*
Setting the Stage

Introduction

The partnership between the Missouri Department of Special Education (DESE) and Missouri Educational Systems and Instruction for Learning (MOEdu-SAIL) started during the 2017-2018 school year with Missouri Model Districts. This initial cohort included 15 selected districts with 91 buildings working together to advance and sustain effective educational practices. The project, now known as District Continuous Improvement (DCI) has grown to include 157 districts with 629 buildings at the start of the 2020-2021 school year. The graphic below provides details regarding the project timeline.
Outcomes

The Missouri Department of Elementary and Secondary Education is committed to maintaining a statewide system designed to support district leaders and educators to achieve exceptional outcomes for all students. Through this partnership, DESE and participating districts work collaboratively to achieve the following outcomes.

• Implement the DCI Framework as a cohesive system of support that can be used statewide in any district, regardless of demographics

• Collaborate across statewide systems and provide resources that support effective education for ALL Missouri students

• Collect data to inform the District Continuous Improvement Framework as a model for effective teaching and learning, identifying the non-negotiables (what works) and areas of flexibility when implementing in various contexts

• Implement effective educational practices resulting in exceptional outcomes for all students, especially students showing risk factors, including students with disabilities

"District Continuous Improvement includes research-based practices that will move any district toward higher student achievement. When district leaders commit to district-wide implementation of these practices, it will change the culture within the district. Teachers will be empowered to collectively make decisions based on data and make adjustments to instruction that will best meet the needs of all students. DCI is the right work, at the right time, for the right reasons. Any district that embraces this work will see lasting improvement."

RPDC Director
DCI Framework

The DCI Framework is a cohesive, interactive system resulting in exceptional outcomes for all Missouri students. The framework is comprised of Content (DCI Practices and supporting materials), Professional Development (coaching, training, and online learning), and Statewide Support (the people).

Content
The eight Professional Learning Modules (DCI Practices) and supporting materials were developed from existing research identifying the high-leverage practices resulting in student achievement.

Professional Development
The DCI Practices are delivered statewide to educators through coaching, training, and online learning.

Statewide Support
Coaching Support Teams support districts with the implementation of the DCI Practices. These teams are made up of experienced educators with expertise in the content as well as effective coaching practices. Districts are grouped into cadres, providing a structure for cross-district learning. The Regional Professional Development Centers, the Missouri Department of Elementary and Secondary Education, and MoEdu-SAIL provide additional support to districts and Coaching Support Teams.

The Framework in Detail - Content
The content for the DCI Framework consists of eight DCI Practices (described in detail beginning on p. 11). The DCI Practices, from which the content of the Professional Learning Modules is derived, are organized into three key components.

Foundations - three foundational educational practices essential for collaborative, data-informed instruction and decision making: Collaborative Teams (CT), Data-Based Decision Making (DBDM), and Common Formative Assessment (CFA)
Setting the Stage

**Effective Teaching and Learning Practices (ETLP)** - two practices, selected from evidence-based practices shown to be highly effective in improving student achievement: Developing Assessment Capable Learners (DACL) with Feedback and Metacognition

**Supportive Context** - three practices that create a supportive context, sustaining and advancing effective teaching and learning: School-Based Implementation Coaching (SBIC), Collective Teacher Efficacy (CTE), and Leadership

The Framework in Detail - Professional Development

The eight DCI Practices are delivered through a professional development approach consisting of training, coaching, and online learning. Additionally, districts/buildings have access to accompanying professional development materials (PowerPoints, handouts, Coaching Companion resources, and Walkthrough Tools) for each DCI Practice.

The Framework in Detail - Statewide Support

DESE provides Statewide Support to participating districts through a partnership with MoEdu-SAIL and Regional Professional Development Centers (RPDCs).

Training and coaching is provided through Coaching Support Teams (CST), comprised of members from MoEdu-SAIL and RPDCs, widening the breadth of available expertise in effective teaching/learning practices (general and special education), behavioral practices (Schoolwide Positive Behavioral Supports), leadership, data, technology, and educational systems change.

Online learning consists of DESE endorsed professional learning materials. Examples include the following.

- Professional Learning Modules with PowerPoints and accompanying handouts
- Coaching Companion resources
- Walkthrough Tools, for districts wanting to provide their own in-house professional development
- The DESE Virtual Learning Platform (VLP)
These professional learning resources are available 24/7 to be used in partnership with the CST or independently by districts wanting to provide their own in-house professional development.

Together, these elements form the DCI Framework and professional development approach through which partners collaborate for exceptional outcomes for all Missouri students.

Research Base

The District Continuous Improvement Framework for improving educational systems is based on the work of many researchers; however, two seminal pieces of research are most evident in the DCI Framework.

The first is Dr. John Hattie's ongoing Visible Learning research in which, through over 800 meta-analyses, he identified educational practices shown to have a high impact on student achievement – practices that influence learning at a greater than average rate. Hattie's work, including his "barometer of influence" and the effective practices chosen for DCI, is described in greater detail starting on page 17 of this Blueprint. As his research is on-going, the most recent findings are referenced in DCI materials.¹

The second is the work of Moving Your Numbers, a study conducted under the guidance of Dr. Martha Thurlow, Director of the National Center on Educational Outcomes (NCEO) and supported by the Office of Special Education Programs (OSEP).²

The results of the Moving Your Numbers research identified six practices common to effective district-level school improvement.

1. Use data well
2. Focus your goals
3. Select and implement shared instructional practices (individually and as teacher teams)
4. Implement deeply
5. Monitor and provide feedback and support
6. Inquire and learn (at the district, school, and teacher team level)

The DCI Framework weaves together these two pieces of research through the content (the eight DCI Practices), professional development, and statewide support.
Benefits of Participation

When districts agree to participate, an important partnership begins. Through the use of the District Continuous Improvement Framework, and working collaboratively with DESE, participating districts/buildings will experience the following benefits of involvement.

- Districts engage in an in-depth implementation and evaluation of the DCI Practices leading to improved instruction and student learning. Teachers and administrators benefit from professional development (PD) activities that focus on policy, process, and instruction - all research based and data driven. Students benefit not only from the improved instruction, but also by learning how to be more active participants in their own learning (Developing Assessment Capable Learners) and learning about their own thinking and learning process and how best to approach any given learning situation (Metacognition).

- Districts work closely with their CST to decide on the district focus, determine their plan of action, and discuss the most appropriate professional development activities for effective support. CSTs maintain on-going communication and interaction with districts with the intent that DCI is truly a value-added partnership for districts.

- Districts build internal capacity and expertise to support ongoing district/school-based coaching. Coaching has proven to be essential for transferring new knowledge and skills into practice. Research has shown implementation with fidelity to dramatically improve with coaching (see pages 24-25 for a more detailed description). When districts embed coaching into their ongoing professional learning, both the quality of teaching and results for students improve.

- Districts have multiple opportunities to interact with other participating districts. Sharing lessons learned, strategies, and insights with their counterparts throughout the state is key to this initiative. Participating districts are organized into cadres, through which there is time for both formal and in-formal district sharing. Lessons learned provide valuable strategies that are shared at regional and statewide collaborative meetings.
Setting the Stage

- Districts engage in a data-driven process. By using data as a part of the process (Data-Based Decision Making), district leaders and teachers make decisions based on district, building, and student-level data.

- Districts gain access to online tools that provide timely professional learning resources and data regarding implementation.

Key Activities

The following key activities describe the role of participating districts.

- Engaging consistently with a CST

- Developing a district-wide DCI implementation plan through use of the Implementation Checklist

- Engaging in district- and building-level professional development, as determined in collaboration with the CST

- Utilizing tools (CWIS, SAPP, VLP) to gather information regarding district and building implementation

- Participating in the collection of educator data in the form of video recordings, interviews, and surveys (all data collection falls within district policy guidelines)

- Participating in regional and state meetings for professional development

- Participating in site visits from DESE and your Coaching Support Team (CST) Facilitator

- Providing ongoing feedback and recommendations for improving the DCI Framework and process
Setting the Stage

DCI Foundational Materials

The Blueprint, Step-by-Step Guide, Administrator’s Guide to Coaching, and the Implementation Zones Guide create a foundational set of materials for District Continuous Improvement. The materials are updated annually, informed by feedback from districts, Coaching Support Team members, and DESE. Annual revisions to these documents incorporate changes based on lessons learned focusing on continued quality improvement.

Blueprint for District and Building Leadership

A blueprint, by definition, is a detailed plan of action. This Blueprint is the roadmap for leading districts through the DCI Framework, addressing all stages of the process, from early implementation through sustaining and scaling-up. Key elements and structures are described in detail. In short, it is a guide for developing educational systems to achieve exceptional outcomes all students.

Step-by-Step Guide

The Step-by-Step Guide provides guidance and recommendations for how to effectively implement the DCI Framework. The Step-by-Step Guide is organized by Essential Function, as described throughout the Practice Profiles (PP). Practice Profiles not only provide educators with concrete examples of the "how to" but also serve as a vehicle for self-monitoring implementation and growth.

Administrator’s Guide to Coaching

The purpose of the Administrator’s Guide to Coaching is to provide support for establishing a district-wide approach to professional learning through coaching. This guide focuses on key aspects of effective coaching and information leaders need to create the conditions necessary for embedding coaching into ongoing district professional learning.

Implementation Zones Guide

Implementation Zones are a data-driven approach to describing district- and building-level implementation processes and outcomes. The Implementation Zones Guide provides an in-depth description of Implementation Zones, including the data and criteria used for zone placement. Examples and descriptions of the IZ Worksheet and IZ Landscape are included.
The Blueprint

The intended users of this Blueprint include all partners in District Continuous Improvement, including District and Building Leadership Teams together with teachers within participating districts, Coaching Support Teams, RPDCs, and DESE.

Suggested Use for the Blueprint

District leaders and Coaching Support Team members should familiarize themselves with the entirety of the Blueprint in order to gain a shared understanding of the integrated pieces; conduct self-assessments of current practices and resulting outcomes; and formulate an action plan.

For example, districts and CSTs have used the Blueprint in the following ways.

- With all staff at the beginning of the school year to review principles of the DCI Framework and DCI Practices
- To build common vocabulary with the Glossary section
- During data team meetings
- To improve implementation of effective strategies by referring to the Practice Profiles (located in the back of the Blueprint)
- During coaching sessions

The Blueprint is the “go-to” source for understanding all the essential pieces of the District Continuous Improvement Framework. I love sharing the Blueprint with district leaders, pointing out the key points for future reference.

CST Facilitator
Overview

Having a thorough understanding of each of the eight DCI Practices (see Figure 1 below) is vital to successful implementation of District Continuous Improvement. A Professional Learning Module, along with a Practice Profile and other accompanying materials, exists for each DCI Practice. The use of Practice Profiles as a way of outlining implementation criteria originated with the National Implementation Research Network (NIRN). Simply put, the Practice Profile outlines expectations in a rubric structure for skills and knowledge that should be learned from the content in any given Professional Learning Module. Each Practice Profile includes Essential Functions which provide a clear description of the features that must be present to say that an innovation is being used to achieve outcomes. The Essential Functions for each DCI Practice are included in the following descriptions along with reflection questions that can guide conversation and deepen understanding.

Watch for this icon that refers to the pages for the appropriate Practice Profile!

Key Component: Foundations

The three foundational pieces of the DCI Practices are Collaborative Teams, Data-Based Decision Making, and Common Formative Assessment.

Foundations: Collaborative Teams

When educators effectively and intentionally collaborate about the most effective practices within curriculum, instruction, assessment, and climate, the result is quality teaching. Quality teaching is further enhanced when educators build collaborative processes into their system, which allows for dialogue, discussion, and planning for all students.

Essential Functions of Collaborative Teams

- Educators collaboratively develop common purposes and goals for improved student outcomes that embrace continuous school improvement
- Educators effectively implement group processes in Collaborative Team meetings
- Educators intentionally use collaborative skills in Collaborative Team meetings

Collaborative Teams Reflection Questions

How often and how well does your team discuss the following?
- Data and how to monitor student progress
- Instructional practices that are connected to student learning
- Data to identify students needing re-teaching
- Alignment of instructional practices to academic standards

What structures do your team use (i.e. agendas, minutes, norms, and roles)?

What collaborative behaviors does your team use (i.e. pausing, paraphrasing, posing questions, putting ideas on the table, providing data, paying attention to self and others, and presuming positive intentions)?

LINKS

The VLP online learning platform and the presenter materials on the MoEdu-SAIL website provide additional indepth content on each element of the framework.
DCI Practices

Foundations: Data-Based Decision Making

District and Building Leadership Teams should use a consistent DBDM process to identify and address student, school, and district improvement needs. Similarly, small groups of teachers should use a consistent DBDM process to identify students’ academic and social/behavioral needs and select practices that address those needs.

Data-Based Decision Making Cycle: Gather, Analyze, Intentionally Act and Analyze Again, Notice and Adjust (GAINS)

The GAINS process is designed to be compatible with various data-based decision making models that are being used in educational settings. The four GAINS steps are aligned to the Practice Profile Essential Functions and are a synthesis of concepts included in most DBDM models, with an emphasis on examining how instruction impacts learning.

---

I appreciate the knowledge and experience that the DCI (Coaching Support) Team brings to our school. As we continue to focus on being a school that uses data to drive our decision making, having this team available to give us guidance has been incredible.

Elementary School Principal
DCI Practices

Essential Functions of Data-Based Decision Making

- **Gather:** Educators establish a collaborative process for collecting data
- **Analyze:** Educators implement a process for examining and interpreting data
- **Intentionally Act & Analyze Again:** Educators determine instructional action steps
- **Notice & Adjust:** Educators use and act upon data by incorporating teaching and learning data into instruction and adjusting instruction accordingly

Finally, through the GAINS process, educators repeat the steps with new data to promote meaningful gains in student learning.

**DBDM Reflection Questions**

- How systematic is your team’s approach to analyzing teaching and learning data?
- When a common misunderstanding is discovered in the data, how does your team address it?
- How does your team assess impact when implementing an instructional change or new practice?

Foundations: Common Formative Assessment

Formative assessment provides ongoing information that can guide and improve teaching and learning during a learning cycle such as a lesson, unit, or course. It may include collaboratively developed assessment instruments as well as formative assessment strategies that are embedded in instruction, rather than administered as separate events. Educators use common formative assessments within a district or building to ensure that student and teacher performance is consistent across grade levels and departments.

The Common Formative Assessment DCI Practice is a systematic and cyclical process designed to provide timely teacher/student feedback on curricula and student learning to improve both instructional practices and academic achievement. Common Formative Assessment is not another instrument or event nor should it be included in grading — but rather it is a collection of practices to improve teaching and accelerate learning.
DCI Practices

Essential Functions of Common Formative Assessment

- Educators develop clear and meaningful learning targets to guide instruction and student learning
- Educators establish clear and measurable student success criteria in a rubric, scoring guide, or checklist
- Educators construct and/or use quality assessment instruments of sound design and that measure the learning targets
- Educators use assessment data to improve student learning

CFA Reflection Questions

- What are ways in which you make sure the learning targets in your classroom are clear and meaningful?
- Are your success criteria clearly aligned to learning targets? How do you make sure that your success criteria clearly relate to what students say and do?
- How do you ensure that the assessments you use are high quality and provide opportunities to clearly show where students are in relation to mastery of the learning target?

NOTE: Educators use many forms of measurement and assessment to determine what students are learning and how instruction or other learning environment functions should be changed in order to improve learning. Other forms include summative and diagnostic assessments. This Blueprint and accompanying professional development materials focus on Common Formative Assessment. Refer to the resources in this Blueprint for additional guidance on these other types of assessment.

Putting the Foundations into Place

The foundation is established when educator teams hold collaborative solution-driven dialogues using data to describe teaching/learning practices and learner outcomes. A collaborative approach to data analysis helps all educators understand the connection between data, instructional decisions, and academic and social/behavioral outcomes for students. In order to have data available for decision making, district- and building-level educators must develop and implement efficient data collection systems to ensure accurate and complete data describing both teaching practices and learner outcomes. Figure 2 (p. 16) highlights the Essential Functions of each of the DCI Foundational Practices described above.
Figure 2. Foundations

**Foundations**

- **Collaborative Teams**
  - Collaboratively develop common purposes and goals for improved student outcomes that embrace continuous school improvement
  - Effectively implement group processes in collaborative meetings
  - Intentionally use collaborative skills in team meetings

- **Data-Based Decision Making**
  - Establish a collaborative process for collecting data
  - Implement a process for examining and interpreting data
  - Determine instructional action steps
  - Use and act upon data by incorporating teaching and learning data into instruction and adjusting instruction accordingly

- **Common Formative Assessment**
  - Develop clear and meaningful learning targets to guide instruction and student learning
  - Establish clear and measurable student success criteria in a rubric, scoring guide, or checklist
  - Construct and/or use quality assessment instruments which are of sound design and measure the learning targets
  - Use assessment data to improve student learning
Key Component: Effective Teaching and Learning Practices

John Hattie’s seminal work, *Visible Learning*, was based on more than 800 meta-analyses of 50,000 research articles, about 150,000 effect sizes, and about 240 million students. Since that 2008 book, Hattie continues to update effect sizes based on his current research. The effect sizes are updated on Visible Learning website (https://visible-learning.org/hattie-ranking-influences-effect-sizes-learning-achievement/). Hattie uses a “Barometer of Influence” as a graphic illustration showing the influence of the practice on learning (see Figure 3).1,4, 5

The effect size is a value determined through statistical analysis to show the relative impact of a practice or intervention. Any effect above zero means achievement is raised by the practice. Alternatively, if the effect size of a practice is below zero and shown in the red zone of the barometer, then the practice has actually detracted from learning. The average effect (one year growth in one year time) size is 0.40. For any teaching/learning practice to be considered worthwhile, it needs to show an improvement in student learning of at least an average gain.

The following practices are included in the DCI Framework as they influence learning at a greater than average rate, higher than .40 effect size.

**ETLP: Developing Assessment Capable Learners**

According to John Hattie, students who are “assessment capable” know where they are going, where they are now, and how to get there. The term assessment capable learner does not describe students who have effective test taking strategies. Rather it means that students:

- know their current level of understanding;
- know the expectations for learning and are confident they can learn them;
- can select effective learning strategies;
- view their own errors as opportunities to learn and seek feedback regarding their efforts;
DCI Practices

- can monitor their own progress in learning and adjust their learning strategies accordingly; and
- know that they are learning and can teach others.

To become assessment capable, students need teachers who use what Frey, Hattie and Fisher⁶ call high yield practices. High yield practices are teaching practices that have an effect size above .40. The higher a practice’s effect size, the more powerful it is in affecting student achievement. The following high yield practices, as illustrated in Figure 4 (p. 19), contribute to the development of assessment capable learners.⁵, ⁶, ⁷

- Self-Reported Grades – effect size 1.33. The practice includes strategies that help students predict their own performance.

- Teacher Clarity - effect size .75. When teachers have clarity they know what students need to learn, communicate those expectations and success criteria to students, and present lessons in a consistent manner.

- Challenging Tasks – effect size .72. Challenging tasks are those that are neither too hard nor too easy, but challenging enough to make students pause and consider what they need to do next. When teachers provide challenging tasks and equip students with problem-solving strategies a growth mindset can be developed.

- Feedback – effect size .70. To be effective, feedback must be timely, specific, understandable, and actionable. Feedback may support the learner with the task, the process of learning, or their own self-regulation.

- Learning Goals – effect size .68. Goals help students understand learning intentions. When students know the learning expectations, they tend to work toward achieving them.

DACL is a marathon, not a sprint. The information is valuable but is to be delivered and practiced in small steps to get valuable results! District Leader
Students who are assessment capable learners are accountable for their own progress and become motivated, effective, self-regulating learners. What do assessment capable learners do? Across all aspects of their learning, they do the following.

- Understand what they are supposed to learn through established learning targets set daily by the teacher
- Monitor their own progress
- Set goals in relation to the learning targets
- Reflect on their learning

**Essential Functions of Developing Assessment Capable Learners**

- Educators teach students to determine “Where am I going?”
- Educators teach students to determine “Where am I now?”
- Educators teach students to determine “How do I close the gap?”

**DACL Reflection Questions**

- When coaching students to develop learning goals, do you use rubrics or scoring guides and sample work?
- Do you provide ongoing and meaningful feedback to students?
- Do you provide opportunity for students to self-reflect and document their learning?
Feedback

Integral to Developing Assessment Capable Learners is the practice of Feedback. When educators teach students to determine “Where am I Now?,” they do so through effective feedback. Feedback is defined as “information provided by an agent (e.g., teacher, peer, book, parent, self, experience) regarding aspects of one’s performance or understanding.” The main purpose of feedback is to improve students’ understanding of “Where am I now?” in relation to a learning target and goal. Notice how the practice of providing effective feedback fits within the practice of Developing Assessment Capable Learners.

Feedback can occur in many forms; however, not all forms are effective. Research shows learning improves when feedback addresses a specific learning task, incorporates strategies for improving performance on tasks, and is available in multiple modalities. Praise, punishment, and extrinsic rewards are the least effective forms of feedback.

Essential Functions of Feedback

- Educators provide descriptive task feedback to all students that clearly links to learning goal and success criteria.
- Educators provide feedback about strengths and offer information to guide improvement to all students multiple times throughout the learning process.
- Educators pace instruction to allow for frequent, descriptive feedback to all students and allow time for students to act on the feedback received.
- Educators ask students to self-regulate by assessing their own progress and justifying their assessments multiple times throughout the learning process.
- Educators instruct students to set personal goals based on feedback and self-assessment.
Feedback Reflection Questions

- When providing student feedback, do you provide descriptive feedback to all students?
- Does your feedback recognize strengths?
- Do you instruct students to set personal goals based on feedback and self-assessment?
- Do you pace instruction to allow students to act on feedback received?

ETLP: Metacognition

Metacognition occurs when students are cognizant of their thinking and level of cognition while in the process of learning. Metacognitive learners develop mental maps or pictures as a way of connecting ideas and concepts. They pose internal questions to guide their inquiry. They consciously review their learning steps/tasks and self-evaluate their own outcomes. Along with feedback, metacognitive practices align with Developing Assessment Capable Learners. When determining current level of learning and ways of closing the learning gap, educators should consider the following.

- Model metacognitive practices by talking about thinking and learning in general and specifically talking about one’s own thinking and learning
- Provide opportunities for students to assess current thinking and learning

When teachers actively guide the development of metacognitive learning, they do so in tandem with providing feedback. For example, a teacher may notice inconsistencies in a class’s ability to solve a type of mathematical equation and need to re-teach the concept. While re-teaching, the teacher models metacognitive processes when demonstrating the computation by verbally detailing and analyzing each step. By doing this, the teacher has shared insight into the teacher’s thinking process as well as given the students words and sequences to use during independent practice. As the teacher continues the lesson by providing students individual and group feedback, the teacher prompts the students to talk through the steps, giving reasons why each step is in a logical order.
Similar to Feedback and Developing Assessment Capable Learners, Metacognitive practices have a positive influence on learning (see Figure 5).

**Figure 5. Metacognition Effect Size = 0.60**

---

**Essential Functions of Metacognition**

- Educators model metacognitive practices by talking about his/her thinking and learning and thinking and learning in general.
- Educators provide opportunity for students to think about the best way to approach or accomplish the learning target and connect to prior experiences.
- Educators provide opportunity for students to monitor progress in relation to learning target and success criteria.
- Educators provide opportunity to determine if learning target was met and reflect on what went well, what did not go well, and what to do differently next time.

---

**Metacognition Reflection Questions**

- Do you talk about your thinking and learning when providing examples or demonstrating a skill?
- Do you provide opportunities for students to share their thinking and problem-solving?
- Do you provide opportunities for students to assess their learning and share ways of improving their learning?
Integrating Effective Teaching and Learning Practices

Developing Assessment Capable Learners, Feedback, and Metacognition are not isolated practices, rather they should be incorporated into daily instruction. Both Feedback and Metacognition fit within the overall structure of Developing Assessment Capable Learners, with Feedback integrated into the DACL materials. Grouping these ETLP together is an effective strategy. For specific guidance on how to implement the practices, see the Resources sections of this Blueprint. Figure 6 highlights key elements of above described practices.

Figure 6. Integrating Foundational Practices

### Effective Teaching and Learning Practices

#### Developing Assessment Capable Learners
- Teach students to determine “Where am I going?”
- Teach students to determine “Where am I now?”
- Teach students to determine “How do I close the gap?”

#### Feedback
- Provide descriptive feedback linking learning goals to success criteria
- Provide feedback about strengths and offer information to guide improvement
- Pace instruction to allow for frequent, descriptive feedback to all students and allow time for students to act on the feedback received
- Prompt students to assess their own progress
- Instruct students to set personal goals based on feedback and self-assessment

#### Metacognition
- Use metacognitive instruction to increase student knowledge
- Support students in using metacognitive processes or planning, monitoring and evaluating
- Promote a classroom culture of metacognitive thinking
Key Component: Supportive Context

School-Based Implementation Coaching

School-Based Implementation Coaching is critical to supporting the development of effective teaching and learning practices. Educators frequently receive exposure to or training on a new practice and are then asked to use this new practice in their classrooms with their students. Applying new practices into one’s own context has challenges. Mistakes in implementation, negative reactions from others (students or colleagues), or the energy needed to problem-solve issues can derail a teacher’s efforts and often result in little or no application of the new practice. Coaches can help model effective implementation, provide feedback to guide implementation, and problem-solve barriers to implementation.

Research over the past two decades has shown the positive impact of coaching on the application of effective teaching and learning practices, as well as on student achievement. Traditional training can build new knowledge, provide opportunities for skill rehearsal, and time for processing new information. However, it is through coaching that the transfer of new skills to classroom practice occurs. As education approaches and practices advance, both new and experienced educators benefit from coaching.

Shernoff et al. (2017) examined teachers’ attitudes and experiences with coaching. They reported that consistent, ongoing coaching was most helpful to teachers’ efforts to integrate new instructional strategies into their teaching. This type of sustained coaching provides multiple opportunities for follow-up and allows a teacher and coach to develop a trusting and productive relationship. Modeling and Feedback were also reported to be key to effective coaching. Classroom-based demonstrations of new strategies provide an opportunity for teachers to observe a new strategy with their own students; while concrete feedback about one’s use of a new strategy was especially helpful as teachers practiced new skills.

Within the DCI Framework, School-Based Implementation Coaching may take a variety of forms. Participating districts most often use one of the following approaches for coaching, however, these are examples and districts may use other models.
DCI Practices

- Peer to Peer involves a reciprocal coaching structure, one educator to another.
- Individual Peer to a Team is one educator coaching a team of educators (grade level or content area teams).
- Team to Team can be any of the following: one grade level or content area team coaching another grade level or content area team within a building; one building team coaching another building team within a district; or one team from District A coaching a team from District B.

Essential Functions of School-Based Implementation Coaching

- Educators develop and maintaining coaching relationships
- Educators provide effective feedback
- Educators develop a strategic and differentiated coaching plan
- Educators engage in solution-driven dialogue
- Educators monitor progress of implementation of effective educational practices

SBIC Reflection Questions

- Is peer-to-peer coaching occurring in your school/district?
- If so, do peer coaches follow an established protocol for observation and feedback?
- Is coaching feedback descriptive, relevant to the context, strengths-based, and respectful?

Why is Coaching Important?

A variety of school-based benefits have been linked to coaching (Education World, 2019): improved teaching and improved student achievement; improved teacher efficacy and satisfaction; enhanced sense of shared responsibility and collaboration; cohesive, positive school culture; increased trust and collegiality among staff; improved focus on student achievement; curriculum alignment; wider repertoire and better understanding of instructional strategies and resources; and reduced job stress.
Collective Teacher Efficacy

In Hattie’s research, Collective Teacher Efficacy is the influence ranked as having the highest effect size for impacting student achievement, at 1.57.5

Collective Teacher Efficacy is a shared belief among teachers in a school that together their efforts will have a positive effect on student learning. Through collaborative efforts with all staff, district leaders, as well as principals and teacher-leaders can successfully build CTE through the following actions (Brinson and Steiner, 2007).

- Build instructional knowledge and skills of all teachers
- Create opportunities for teachers to collaboratively share skills and experience
- Provide actionable feedback on teacher performance
- Involve teachers in shared decision making

School leaders can design intentional support for establishing CTE by providing opportunities for the teachers to experience self-efficacy, as outlined in the seminal work of Bandura (1977).

- Mastery Experience (experience success firsthand), the strongest source
- Vicarious Experience (success, as modeled by others)
- Social Persuasion (where trusted sources give feedback and encouragement)
- Affective State (physiological effects)

The collection of Professional Learning Modules align to and support the development of CTE. Through participation in the modules as shared learning, educators build knowledge, practice instructional skills, engage in collaborative problem solving, and receive coaching with descriptive feedback and encouragement. Each of these opportunities, in addition to the CTE focused Professional Learning Module, are designed to foster CTE school wide and district wide.
**Essential Functions of Collective Teacher Efficacy**

**District/building leaders**

- Provide opportunities for teachers to experience the four sources of efficacy, and teachers have a combined belief that they have a major impact on student learning.
- Provide opportunities for teacher collaboration that encourages the development of social networks focused on improving instructional practice.
- Design school structures, promote professional development, and allot time in ways that support the development of teacher leadership.
- Establish a climate that values teacher voice in decision making.
- Design intentional supports that promote collaborative teacher inquiry.

**Collective Teacher Efficacy Reflection Questions**

- Would the majority of educators in your district/building say that they have the primary impact on student learning?
- Do the majority of teachers participate in formal and informal collaborative social networks?
- Do the majority of teachers participate in school leadership opportunities through school improvement committees, providing professional learning, curriculum development, professional organizations and/or family/community partnerships?
- Do teachers examine their educational practices collaboratively with others?
- Would teachers say they have an influential voice in district/building decisions?
Leadership for Effective Implementation of District-Wide Evidence-Based Practices

Educational leadership practices directly affect teachers and their ability to provide effective instruction. Researchers have found a clear link between strong district/school leadership and positive student outcomes.13 By creating a culture committed to continuous improvement, districts are able to assess their impact, analyze options and make adjustments as needed to improve student outcomes.

Leaders focused on building and sustaining continuous improvement share some common characteristics. First, they focus on alignment. They view their districts as systems with interconnected policies and practices. While each school in a district may have diverse needs, leaders focused on continuous improvement ensure there is alignment across their district related to initiatives, goals, and instructional priorities. Second, school leaders focus on path setting. They establish structures and support for decision making, communication, and collaboration. For large-scale, sustainable changes, educators must understand how their actions are important to the system. The third characteristic of effective leaders is their ability to lead by modeling a growth-centered, trust-based culture. When staff see alignment between what leaders say and their actions, an organizational culture of trust is created. Leaders who view educators and themselves as capable learners whose abilities can be developed focus on learning, which fosters the resilience essential for change to occur. Lastly, effective leaders are able to empower others through supportive relationships and instructional leadership.

Teachers are empowered when they individually and collectively trust they can master and have control over issues that concern them.14 According to the New Teacher Center, schools with the highest levels of instructional and teacher leadership rank 10 percentile points higher in both math and language arts achievement on state tests compared to schools with the lowest levels.15 When teachers have a voice and their insights are considered in decision making, the result is better outcomes for all students.16
Essential Functions of Leadership for Effective Implementation of District-Wide Evidence-Based Practices

District/building leadership

- Develops, aligns, and monitors a system-wide plan for implementation focusing on impact within a cycle of continuous improvement
- Sets a path for continuous improvement that is data informed and occurs within a collaborative school culture
- Models and facilitates qualities of trust and growth mindset as key to a culture of continuous improvement
- Empowers educators at all levels to active engagement in continuous improvement and collective responsibility for student growth

Leadership Reflection Questions

- As an educational leader, how do you provide a collaborative culture among teachers and students?
- How do you use data to determine effective practices to implement school/district-wide?
- How do you support and guide the use of common formative assessments?
- In what ways have you developed leadership team capacity for data-based decision making?

The beliefs, attitudes, and culture of an administrative team are critical as a school moves forward to implement and support effective practices to maximize impact on student growth and learning. We have found the Leadership Module to be quite essential as a school starts into the process. One district provides a perfect example of a group of administrators working through the leadership module in order to implement and sustain a systemic framework. This group spent the first half of the year learning together as an administrative team. During the second half of the year, they are beginning to move forward with the core modules with their staff. They have become a more cohesive group of administrators throughout the year.

CST Consultant
Integrating Supportive Context

Figure 7 highlights the Essential Functions of each of the Supportive Context DCI Practices described above.

Figure 7. Integrating Supportive Context Practices

**Supportive Context**

- **School-Based Implementation Coaching**
  - Develop and maintain coaching relationships
  - Provide effective feedback
  - Develop a strategic and differentiated coaching plan.
  - Use solution dialogue
  - Progress monitor implementation of effective educational practices

- **Collective Teacher Efficacy**
  - Provide opportunities for teachers to experience the four sources of efficacy, and teachers have a combined belief that they have a major impact on student learning
  - Provide opportunities for teacher collaboration that encourages the development of social networks focused on improving instructional practice
  - Design school structures, promote professional development, and allot time in ways that support the development of teacher leadership
  - Establish a climate that values teacher voice in decision making
  - Design intentional supports that promote collaborative teacher inquiry

- **Leadership**
  - Develop, align, and monitor a system-wide plan for implementation focusing on impact within a cycle of continuous improvement
  - Set a path for continuous improvement that is data informed and occurs within a collaborative school culture
  - Model and facilitate qualities of trust and growth mindset as key to a culture of continuous improvement
  - Empower educators at all levels to active engagement in continuous improvement and collective responsibility for student growth
Systems Approach

The work of SISEP (State Implementation and Scaling-up of Evidence-based Practices)\(^\text{17}\) has identified considerations for and qualities of effective systems change. This Systems Approach section will review Implementation Stages, Implementation Zones, and Implementation Teams. The Implementation Stages help us to understand what effective implementation looks like and how to get there. The newly developed Implementation Zones can guide district conversations answering "where are we now?" in the journey toward full implementation of the DCI Framework. Lastly, Implementation Teams guide the implementation process, working to align and support the components of the educational system as it matures across the stages of implementation.\(^\text{18}\)

Implementation Stages

Implementation Stages are described below and their alignment with the Implementation Zones is detailed on page 37.

Exploration & Adoption

Participating districts will begin by reviewing current strengths and needs regarding effective educational practices in the DCI Framework.

* Exploration & Adoption Guiding Questions*

- What do we currently have in place that is effectively supporting student learning? That is supporting effective instructions? How do we know our practices are effective?
- What do educators need in order to improve instruction?
- What do our systems of PD (coaching and training) look like? Are these addressing educator needs? How do we know?

*The focus on systems work and alignment makes so much sense.*

*This work and support is filling my bucket.*

District Superintendent
Program Installation

This stage establishes an environment supportive of implementation.

Program Installation Guiding Questions

- At the district level, what do we need to put into place to support building-level implementation of the DCI Practices?
- What resources, guidance, policies, support, etc. are needed for consistence across the district? Are there unique pockets of needs within the district?
- How can we best address the needs for information and establish ownership for implementation?

Initial Implementation

The current status of practices and procedures has been analyzed and the stage has been set for initial implementation: professional development is provided and educators begin implementing the DCI components. It is important to monitor these early steps for fidelity and to identify support needs that emerge.

Initial Implementation Guiding Questions

- Are initial implementation steps proceeding as expected? What needs for resources or support are emerging?
- Which aspects of the framework show promise for being effective and which need to be revisited?
- What are the district-level considerations to address prior to full operation?
Full Operation

During initial implementation, districts engage in a thoughtful process of what is working and what is not working as they begin implementation. Full Operation is implementation of the DCI Framework in all buildings.

Full Operation Guiding Questions

- Is fidelity of implementation being met? If not, what resources and supports are needed to improve implementation with fidelity?
- Which aspects of the framework have been proven to be effective and which require revision?

Innovation & Sustainability

Innovation is the stage at which the model has been fully implemented and sufficient data has been gathered. Data is analyzed and interpreted and, based on interpretations of the data, modifications, additions, and subtractions are made to the model. The ultimate goal is a sustainable model of services and supports that provides a valid, reliable, and evidence-based approach to responding to the education needs of all of Missouri’s students. In this stage, districts continue to implement effective practices and make data-driven decisions, all while being ever mindful of the changing dynamics of enrollment and needs.

Implementation Drivers

The National Implementation Research Network identified nine infrastructure components essential for adopting and fully implementing an evidence-based practice. Referred to as “drivers,” these components address competencies important for implementation, organizational capacity to support the development of new practices, and leadership for systems change.

For more information about the implementation drivers and their function in the implementation process, see National Implementation Research Network.
Competency Drivers

Competency drivers ensure that education staff have the knowledge, skills, and abilities to implement new practices, as well as the feedback essential for improving practice.

**Selection:** Matching staff knowledge, skills, and abilities to expected performance is essential for launching and maintaining implementation of new practices.

**Training & Coaching:** Teachers, administrators, and other education staff need support for learning how to apply new practices in daily settings. Through coaching, teachers, administrators, and other education staff receive job-embedded guidance, observation, and feedback.

**Fidelity/Performance Assessment:** The DCI Practices included in the DCI Framework are evidence-based. This means they have been through rigorous study to determine impact on student achievement. Because the goal is results, like those shown through the research, it is important to monitor fidelity of implementation.

**Competency Drivers Guiding Questions**

- Who are the people involved in DCI at all levels? Do these people have the needed experience, expertise, and time?
- What do people need to know about DCI? How are they going to learn it? What are the effort, materials, format, time, and sequence required?
- Is DCI implemented with fidelity? Which components are occurring with fidelity and which are not?

Organization Drivers

Organization drivers form the supports and structures keeping implementation processes on track, evaluating drift in implementation through data, and determining adjustments to implementation as needed.

**Decision-Support Data Systems:** For data-informed decisions, multiple types and sources of data are important. Data must be reliable and accessible. The collection and review of data should be built into daily education routines and processes.
Administration & Systems: Education administrators and their teams hold these responsibilities.

- Identify and address challenges
- Form clear communication protocols and feedback loops
- Develop and adjust policies and procedures
- Reduce system barriers to implementing the program as intended

Leadership: Effective leaders employ both technical and adaptive strategies, use data effectively, and form collaborative processes for addressing ongoing implementation hurdles.

Together, the drivers are evident and integrated in effective implementation. They are co-occurring, complementary, and compensatory. Strengths in one driver can potentially minimize the effects of a weaker driver. For more information about implementation stages and drivers, see the Implementation Research Network’s Active Implementation Hub (http://implementation.fpg.unc.edu/). This website includes online modules for each component of implementation.

Organization Drivers Guiding Questions

- What do we need to make data-based decisions about DCI overall? About components of DCI?
- What systems level of support is needed to keep DCI in motion? To move DCI forward?
- To what extent are we aligning our DCI work to other requirements and expectations?
- Do educator leaders employ effective strategies for supporting ongoing implementation?
- What support do they need to improve use of data and collaborative processes?
Implementation Zones

Purpose & Function

Implementation Zones (IZs) are a data-driven approach to describing district- and building-level implementation processes and outcomes.

The purpose of Implementation Zones is to provide a structure to address the following needs.

- To differentiate support for districts based on implementation data
- To help districts better understand the journey from onboarding to sustainability
- To improve efficiency of CST and Facilitator effort
- To improve continuity of support from year to year
- To aid in sustainability of DCI

Districts are organized as cadres representing each Implementation Zone. The multiple benefits to this approach are listed below.

- Clarity to the implementation processes toward sustainability, providing districts an increased understanding of the DCI journey
- Consistency of message and materials provided to districts - the CSTs and Facilitators will be working with districts that have similar strengths and weaknesses, providing the opportunity to draw upon and share successful experiences other districts are having

Implementation Zones

Implementation Zones are data-driven representations of district journeys to full implementation of, and ultimately sustaining, district continuous improvement. Building on the knowledge of implementation stages (pages 31-33); the Implementation Zones incorporate district-wide implementation process and outcomes. Figure 8 below provides a description of district implementation within each zone and the correlation with the implementation stages. Note that both early and developing implementation zones share overlapping characteristics with the implementation stages of (a) exploration and adoption and (b) program installation. Similarly, the implementation zones of full implementation and initial sustaining share qualities with the implementation stage known as full operation. Lastly, when districts demonstrate multiple years of effective DCI implementation (initial sustaining implementation zone), they are also showing characteristics consistent with the innovation and full sustainability implementation stages.

Figure 8. Implementation Zones and Implementation Stages

<table>
<thead>
<tr>
<th>Implementation Zones</th>
<th>Implementation Stages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Early: Districts beginning DCI</td>
<td>Exploration and adoption</td>
</tr>
<tr>
<td>Developing: Districts putting elements of the DCI Framework into place and starting to see evidence of effective implementation</td>
<td>Program installation</td>
</tr>
<tr>
<td>Initial Implementation: Districts implementing all pieces of the DCI Framework to some, and possibly varying, extent across the district</td>
<td>Initial implementation</td>
</tr>
<tr>
<td>Full Implementation: Districts showing initial evidence of sustaining effective practices</td>
<td>Full operation</td>
</tr>
<tr>
<td>Initial Sustaining: Districts showing sustained implementation of effective practices across multiple years</td>
<td>Innovation &amp; Sustainability</td>
</tr>
</tbody>
</table>
Data Elements & Zone Determination

As noted earlier, the IZ structure is data-driven. The following graphic illustrates the elements used in IZ determination. District and building-level data are used for IZ determination, as illustrated below.

- **District-Level Processes** include VLP and SAPP usage data
- **District-Level Outcomes** include data from the Implementation Checklist: District-Level
- **Building-Level Processes and Outcome** are based on CWIS data
- **Professional Judgement** - The Coaching Support Team Facilitators, with assistance from team members, review each district’s implementation zone data. Through this review, implementation zone determinations are confirmed.

IZ Worksheet and IZ Landscape

The data elements determining a district’s implementation zone are displayed in a worksheet and as a graphic titled IZ Landscape. Below is an example of the IZ Worksheet where all the data are gathered.

<table>
<thead>
<tr>
<th>District: SAMPLE DISTRICT</th>
<th>Date: April 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of buildings: 7</td>
<td></td>
</tr>
<tr>
<td>Number of instructional staff: 80</td>

<td>1</td>
</tr>
</tbody>
</table>

Districts, together with their Facilitator/CST, will be able to see each data piece in the Worksheet. This information not only makes Zone placement transparent, it also serves to help plan to move forward through the implementation process.

---

See the Implementation Zones Guide for an in-depth description of the data elements and criteria.
IZ Landscape

The IZ Landscape is a visual representation of the data, bringing all the data elements together to illustrate the Implementation Zone for that district. Below is a sample IZ Landscape.

The Implementation Zone is represented by the red dotted bar. Implementation zones, with examples, are described more fully in the Implementation Zones Guide.

Context for Improving Systems

Implementation Teams

Implementation teams provide needed support and structure for ensuring implementation with fidelity occurs. In the DCI Framework are two levels of implementation teams: district-level and building-level. Each have roles in guiding and supporting implementation. It is important for districts and buildings to refrain from establishing additional leadership teams for guiding the DCI implementation. Rather, districts and buildings should reflect on their current team structures and integrate team responsibilities to the greatest extent possible.

Core competencies of implementation team members, at both the district and building level, include the following.

- Knowledge and understanding of the DCI Framework and Practices
- Knowledge of expected DCI implementation processes
- Applied experience in using data for improving practices and systems
District Leadership Team

The District Leadership Team is comprised of district-level administrators, district-wide coaches, curriculum and assessment leaders, professional development coordinators, and other instructional and administrative leaders. This team supports implementation in the following ways.

- Using data to inform district-level policy and evaluate district-level systems
- Providing support for assuring the implementation drivers are addressed within each building
- Providing adaptive and technical solutions essential for sustaining and scaling-up the DCI Framework across the district
- Monitoring implementation progress and addressing challenges at the district-level, which affect building-level implementation
- Collaborating with Building Leadership Teams to gain insight into the effectiveness of implementation and challenges shared across the district

Building Leadership Team

The Building Leadership Team is comprised of building-level administrators, teacher-leaders, instructional coaches, and other persons integral to the overall building-level system. This team supports implementation in the following ways.

- Using data to inform building-level policy and evaluate building-level systems
- Addressing the implementation drivers in the building context
- Providing adaptive and technical solutions essential for sustaining and scaling-up the DCI Framework and Practices within the building
- Monitoring implementation progress and addressing challenges at the building-level
- Collaborate with district-leadership teams to share insight into the effectiveness of implementation and challenges occurring in the building
Alignment

Educators are faced with recurring challenges of implementing, sustaining, and evaluating multiple practices, systems, and policies simultaneously. Being purposeful about developing a process for aligning, monitoring alignment, and sustaining alignment is an important function of district-level and building-level leadership. In a recent Technical Guide for Alignment, the National Technical Assistance Center on Schoolwide Positive Behavior Supports outlines steps for aligning practices and initiatives. Drawing from this technical guide, the steps below outline a process for reviewing current initiatives and aligning the DCI Framework with current practices and systems shown to be effective for improving student achievement.

1. Assess current initiatives
   a. Define the valued outcome to be achieved
   b. Develop an inventory of related systems, initiatives, and practices currently implemented across the district
   c. Identify the practices and initiatives to be aligned and determine common features
   d. Identify the system features supporting the initiative or practice
   e. Design a plan for aligned implementation, including collection of data, evaluation, and professional development

2. Adopt formal alignment process
   a. Design protocols for considering the adoption of new practices within alignment to current, effective practices
   b. Enable a team to monitor the effectiveness of alignment and lead the consideration of new practices as needs arise

Effective leaders understand that alignment is not something to check off a to-do list. Alignment is a dynamic, ongoing process that requires continual monitoring and realigning as conditions and needs change.

Straw, Davis, Scullard, Kukkonen, & Franklin (2013)

See the Step-by-Step Guide, Essential Function 4
Implementation Practice Profile & Checklist

The Implementation Practice Profile: District-Level and Implementation Checklist: District-Level are tools designed for district-level planning for DCI participation. Organized by the four Essential Functions of District Leadership Teams, the checklist provides structure noting current status and indicating next steps.

- District leaders maintain a collaborative culture and climate at the district-level and with building leaders
- District leaders demonstrate commitment to school improvement through participation in coaching, training, and data-driven action to improve instructional practice
- District leaders review district-level and building-level instruction and learning outcomes data and provide support based on data
- District leaders align expectations and requirements across the district in order to improve efficiency, consistency, and effectiveness of instruction

The checklist should be used alongside the Step-by-Step Guide and the District Implementation Practice Profile.
Data Informed Process

Data elements at all stages and levels of implementation can inform sustainability of effective educational practices and influence the design of processes and systems. The data elements include self-assessment, observation, implementation survey, student achievement, and other qualitative data such as artifacts, process documents, and protocols.

Figure 9 (page 45) shows the “big picture” of the multiple factors affecting implementation of the DCI Framework leading to outcomes for improved instruction and student achievement. It’s important to notice how the arrows denote a feedback loop using data.

Practice Profiles

Implementation with fidelity requires clearly described implementation criteria. The Practice Profile framework has been developed by the National Implementation Research Network (NIRN) as a way of outlining implementation criteria using a rubric structure with clearly defined practice-level characteristics. The Practice Profile template show four levels of implementation and is anchored by the Essential Functions. The implementation levels are exemplary, proficient, close to proficient, and far from proficient. The Practice Profiles for the components of DCI are included in the Resources and Tools section of this Blueprint.

How to Use the Practice Profile

The Practice Profile has multiple uses. Because it provides the educator with concrete examples of implementation, it is a key component of training and coaching on the specific DCI Practice. It can also be used for self-monitoring implementation because it serves as a reminder as to the implementation criteria. Practice Profiles can also be used for providing feedback after observation of the practice. Building-level and district leaders can incorporate the use of Practice Profiles into educator evaluation processes. In addition, the Practice Profiles can be used when peer coaching.

LINKS

The Practice Profiles can be found on the MoEdu-SAIL website and the SAPP can be accessed on the DESE Web Apps.
Self-Assessment Practice Profile

The Self-Assessment Practice Profile is an online tool for team-based analysis of Practice Profiles ([http://apps.dese.mo.gov](http://apps.dese.mo.gov)). Through the use of this tool, individual educators as well as teams of educators indicate their level of implementation as they complete a questionnaire aligned to each item on the Practice Profiles. Educators can choose to complete all of the Practice Profiles or select only a few of the DCI Practices. After completing the questionnaire, a dashboard of results is shown and reports can be downloaded. Through the reports, an administrator has a collective view of the Practice Profiles across a team, grade level, or other administrator-determined group of educators. There is additional information about the SAPP starting on page 52.

Collaborative Work Implementation Survey (CWIS)

DCI districts use the Collaborative Work Implementation Survey (CWIS). The CWIS is a 24-item instrument designed using a five-point Likert scale (see Figure 10 listing the survey items). The survey measures the extent to which DCI processes and practices are in place.

CWIS administration is a required part of a district’s commitment to DCI. The results from the CWIS are crucial in planning for effective professional development. They help identify district-wide strengths and weaknesses pertaining to the DCI Practices. Using CWIS data, District Leadership Teams can work with CST Facilitators to identify district-wide goals. Be sure to administer the CWIS twice the first year – early on for baseline and again in the spring. Subsequently you will take it yearly in the spring.
Figure 9. DCI Components & Data Cycle

DCI Components

Coaching support in following areas
- Effective educational practices
  - Collaborative teams
  - Data-based decision making
- Common formative assessment
- Effective teaching/learning practices
  - Developing assessment capable learners
  + Feedback
  - Metacognition
- School-based implementation coaching
- Collective teacher efficacy
- Leadership for effective implementation of district-wide evidence-based practices

Implementation processes and protocols
- Administrative supports
- System supports
- Training
- Performance review & feedback
- Teaming & collaboration
- Ongoing evaluation measures, tools, and processes

Outcomes

- Increase educator knowledge
- Improve educator application in district/building setting
- Full implementation with fidelity
- Student achievement

Program Review
For scaling-up and replication
- What works?
- What needs to be revised?
- What needs to be added/dropped?
- What needs to be reinforced?

Data
Data collection and analysis
- Self-assessment
- Observation
- Implementation survey
- Artifacts, process documents, and other qualitative data
- Student achievement

Influencers
- Comprehensiveness of program
- Quality of professional development received
- Administrative role
- Participant response
- District/building context
- Collective teacher/administrator efficacy
**COLLABORATIVE, DATA-DRIVEN CULTURE**

<table>
<thead>
<tr>
<th>COLLABORATION</th>
<th>TEAMS USE DATA</th>

DCI Framework

Professional Learning Modules (PLMs)

Research shows that conventional forms of professional development (i.e., one-shot workshops and conferences) do not provide the support needed to improve teaching practices. Effective professional development needs to be authentic and ongoing. Furthermore, professional development should address adult learning methods to ensure effectiveness through levels of instruction (i.e., introduce, illustrate, practice, evaluate, reflect, and master). A Professional Learning Module is a focused approach to professional development content that addresses adult learning principles, upholds specific characteristics of high quality professional development, and focuses on implementation at the classroom level. Table 1 below describes in detail the components of a Professional Learning Module, specifying the purpose of each component and providing examples of content.

<table>
<thead>
<tr>
<th>Component</th>
<th>Purpose</th>
<th>Example of content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preparation</td>
<td>Provide opportunity for learners to engage in the content prior to the formal training</td>
<td>Learning objectives, Expectations for the training, Preparatory reading, Reflection exercise</td>
</tr>
<tr>
<td>Opening &amp; introductions</td>
<td>Provide an overview of the day, including reviewing learner objectives, outcomes, and essential questions</td>
<td>Session at-a-glance, Introductions, Essential questions, Norms, Pre-assessment</td>
</tr>
<tr>
<td>Why the topic is important</td>
<td>Review the basics and relevance to student learning</td>
<td>Implications for student learning, Ways implementation aligns with MO Learning Standards</td>
</tr>
<tr>
<td>Overview of the topic</td>
<td>Provide learner with core concepts, terms, and vision for implementation</td>
<td>Core concepts, Glossary of terms, Implementation example</td>

<tr>
<td>Unpacking the topic</td>
<td>Explore the core components and implementation steps</td>
<td>Detailed description of the core components, Rationale for components, Detailed implementation steps</td>
</tr>
<tr>
<td>Topic in practice</td>
<td>Provide opportunity for learners to discuss what application in the classroom looks like</td>
<td>Detailed description of what implementation looks like, Group discussion on what implementation looks like in a variety of contexts, Measuring fidelity, Using data to inform practice</td>
</tr>
<tr>
<td>Topic in action</td>
<td>Explore ways for the learners to incorporate the new knowledge and skills into their teaching</td>
<td>Reflection on what implementation would look like in their classrooms, Discuss and problem-solve potential challenges to implementation and fidelity drift</td>
</tr>
<tr>
<td>Assessment &amp; reflection</td>
<td>Provide opportunity for the learners to reflect on their learning and potential implementation challenges</td>
<td>Post-assessment learner knowledge, Reflect on personal teaching context and implementation</td>
</tr>
<tr>
<td>Closing &amp; follow-up</td>
<td>Provide opportunity for learner to outline their implementation steps and plans for follow-up coaching</td>
<td>Template for outlining implementation steps in personal teaching contexts and follow-up coaching, Additional resources for further learning</td>
</tr>
</tbody>
</table>
Coaching Support Teams

CSTs provide ongoing contact and support to the DCI districts. Professionals comprising a CST hold identified expertise in areas of leadership and school culture, academics, social/behavioral, special education, data, technology, assessment, communication, accountability/MSIP, and systems change. CSTs work closely with District Leadership Teams to support and increase school district capacity in implementation and sustainability of evidence-based educational practices.

The partnership between the CST and DCI districts involves the following.

- Supporting district leadership through the Blueprint for a cohesive, integrated district plan of professional development to deepen implementation of evidence-based educational practices
- Assisting with identifying ways of embedding evidence-based educational practices within district need and context
- Creating, identifying, and providing coaching on DCI Practices

Districts are grouped by cadre with other districts in the same Implementation Zone, allowing for greater consistency of support, problem solving, and the opportunity to share with each other both successes and struggles alike.

A CST Facilitator provides leadership for the cadre and the Coaching Support Team. In addition to the relationship with the CST Facilitator, each district in the cadre will be assigned a mini-team of consultants. This mini-team is chosen for the unique needs of a district and provides consistency of relationships from previous years (when possible) and the necessary expertise for a given district. These teams can change as needed throughout the year as a district evolves and focus changes.

Implementation Specialists focus on onboarding new districts and communicating with current districts if extra support is needed. The on-boarding will include the following.

- Provide initial and early contact with districts to introduce DCI, including scope of work and systems needed for implementation
- Review implementation support resources
- Work with appropriate district personnel to assure VLP access for all

The District Leadership Team is tremendously pleased with the guidance and support that comes with the DCI process.... It not only provides professional development for the leadership team and teachers, but the process brings several focus areas into one plan. This is important so that everyone in the district realizes the connection between everything that is being done and the DCI plan.

   District Superintendent
Support

• Introduce Implementation Checklist, District Level Implementation Practice Profile, and CWIS

• Develop a district’s working knowledge of the DCI Practices

Current districts can expect their primary communication regarding implementation processes and support to be with the CST Facilitator.

Regional Professional Development Centers

The nine Regional Professional Development Centers (RPDCs) continue to be a resource for addressing training needs. DCI partners closely with the RPDC Directors who are integral to the CST process. As the CST and the District identify needs for training, the CST Facilitator will reach out to a RPDC consultant holding the needed expertise to provide training.

Missouri DESE

The Missouri Department of Elementary and Secondary Education aims to facilitate the development and implementation of a statewide system of effective evidence-based educational practices to support districts and buildings to achieve exceptional outcomes for all students. DESE provides various supports for active engagement and implementation of the process with fidelity.

• A system for coordination of training and coaching for the districts/buildings within a job-embedded environment

• A system for development of school-based implementation coaching, at the district and building levels

• Resources and supports to allow the districts/buildings to participate

• On-site technical assistance and observation visits

• Opportunities for cross-district collaboration and sharing

Web-Based Tools

This section presents three types of tools for guiding professional development, implementation, and use of data. These tools include: Virtual Learning Platform, and Self-Assessment Practice Profile.
Virtual Learning Platform

The Virtual Learning Platform (VLP) is an online portal that provides access to DCI Professional Learning Modules and data tools (CWIS, SAPPs, etc). In addition to in-person or virtual coachings and trainings, DCI districts have 24/7 access to these DESE endorsed, evidence-based DCI materials.

The VLP is available to teachers and school administrators through DESE’s Web Application Portal and includes space for user collaboration, pre/post assessments, handouts, worksheets, bookmarking of courses in progress, and other materials required for training. The system can be accessed at any time and may be used as a reference for users once the course(s) are complete. CSTs can provide support to users when accessing the VLP.

The materials in the Virtual Learning Platform are organized to provide maximum flexibility of access for all users, from totally self-directed to highly directed and structured. While the type of user may vary, all users have access to all course materials at any time. The Virtual Platform may be used in a variety of ways. It may be used by individual or groups of learners. A group of learners may or may not be guided by a leader/facilitator. A district/building may decide to learn and implement the content without outside support or organize learning cohorts using an internal facilitator (team leader). For schools desiring more support, RPDC staff is available to provide initial training and/or follow-up coaching and technical assistance activities through contracted services. Figure 10 below is a screenshot of the Dashboard and Building Self-Assessment Score report.

Figure 10. Dashboard & Building Self-Assessment Score Report
Support

The Self-Assessment Practice Profile (SAPP) is a tool designed to help educators self-check implementation levels of newly learned skills and knowledge. Educators submit responses to a questionnaire (see Figure 11, p. 53) aligned with each Professional Learning Module’s Practice Profile (apps.dese.mo.gov). Questionnaires elicit current levels of knowledge, skills, and abilities for DCI Practices. When educators submit questionnaire responses, they receive immediate feedback in the form of a shaded Practice Profile (see Figure 12, p. 53). Shaded Practice Profiles are collected in the educator’s “Your Assessments” box (see Figure 13, p. 54), making it easy to track individual progress over time.

Building and district leaders access educator responses to build reports in the form of building-level heat maps (see Figure 14, p. 54). Reports can be built for selected teams (grade level, content level), providing a picture of implementation levels across the district. Building reports are collected in the building leaders “Reports” box. Reports should be used for collective planning among all levels of educators. Educators are encouraged to use the SAPP more than once per year to gain insight about collective progress on focus areas. However, the SAPP can be used more frequently as a coaching or reflective tool as needed.

SAPP implementation materials include self-assessment questionnaires aligned with each DCI Practice, access to individual shaded Practice Profiles, and access to building-level heat maps. Shown in Figure 15 (p. 55), a visual of the most recent Self-Assessment Practice Profiles is displayed in a single location. The score key gives at a self assessed glance of individual progress in implementation of each of the Professional Learning Modules.

Several online Professional Learning Modules provide the opportunity for a pre and post assessment. These assessments assist in gauging the knowledge obtained from the online experience (Figure 16, p. 55).

| 1                  | Educators develop clear and meaningful learning targets to guide instruction and student learning. | Learning targets are developed that meet 5/6 criteria.  
- Learning target is clearly connected to essential learning in the domain  
- Learning target develops deep understanding of underlying concepts and/or acquisition of skills  
- Learning target clearly engages higher order thinking processes  
- Learning target is clearly manageable and can be accomplished in the course of a lesson or unit (may be several periods)  
- Learning target is clearly explained to students  
- Connections between current learning target and prior learning are clearly made | 4/6 criteria are met including the following.  
- Learning target is clearly connected to essential learning in the domain | 3/6 criteria are met including the following.  
- Learning target is clearly connected to essential learning in the domain | Fewer than 3/6 criteria are met |
| 2                  | Educators establish clear and measurable student success criteria in a rubric, scoring guide, or checklist. | Establish clear and measurable student success criteria that meet 4/5 criteria.  
- Success criteria are clearly and effectively aligned to learning targets  
- Success criteria clearly and effectively relate to what students will say, do, make, or write to show evidence of learning  
- Success criteria clearly and effectively reflect ways for students to indicate their current status relative to the learning targets  
- Success criteria are communicated in language students can fully understand  
- Success criteria are frequently referred to during the learning process | 3/5 criteria are met including the following.  
- Success criteria are clearly and effectively aligned to learning targets  
- Success criteria clearly and effectively relate to what students will say, do, make, or write to show evidence of learning | The following criteria are met.  
- Success criteria are clearly and effectively aligned to learning targets  
- Success criteria clearly and effectively relate to what students will say, do, make, or write to show evidence of learning | Fewer than 2/5 of the criteria are met |
|   | Support | Quality assessment instruments meet 4/5 criteria.  
Formative assessments  
• Are used to collect data on student learning during the learning process  
• Are fully aligned with the learning target and success criteria  
• Are clearly appropriate for the purpose of generating data in relation to the success criteria  
• Are consistently and strategically placed during the course of the learning process  
• Provide opportunities for students to clearly show “where am I now” in relation to mastery of the learning target | 3/5 criteria are met including the following.  
• Formative assessments are used to collect data on student learning during the learning process | 2/5 criteria are met including the following.  
• Formative assessments are used to collect data on student learning during the learning process | Fewer than 2/5 of the criteria are met |
|---|---|---|---|---|
| 3 | Educators construct and/or use quality assessment instruments which are of sound design and measure the learning targets. | 3/5 criteria are met including the following.  
• Formative assessments are used to collect data on student learning during the learning process | 2/5 criteria are met including the following.  
• Formative assessments are used to collect data on student learning during the learning process | No criteria are met |
| 4 | Educators use assessment data to improve student learning. | Assessment data is used to improve student learning and meets 3/3 criteria.  
• The teacher’s decisions about next steps are completely based on evidence  
• The teacher takes clearly appropriate action based on evidence (e.g., to continue as planned, scaffold, give student feedback, shift focus)  
• The teacher feedback to students is clearly aligned with the learning target and success criteria | 2/3 of the criteria are met including the following.  
• The teacher’s decisions about next steps are completely based on evidence | The following criterion is met.  
• The teacher’s decisions about next steps are completely based on evidence | No criteria are met |

| 1 Developing metacognition in learners | When developing metacognition in learners 5/5 criteria are met.  
• When presenting students with a task, the teacher promotes a metacognitive environment by talking about thinking and learning in general and specifically talking about one’s own thinking and learning  
• When presenting students with a task, the teacher models metacognitive practices before, during, and after learning  
• When presenting students with a task, the teacher provides opportunity for students to think about the best way to approach the task or accomplish the learning target and connect to prior experiences  
• When presenting students with a task, the teacher provides opportunity for students to monitor progress in relation to learning target and success criteria  
• When presenting students with a task, the teacher provides students opportunity to determine if learning target was met and reflect on what went well what did not go well and what to do differently next time | 4/5 criteria are met | (Skill is emerging, but not yet to proficiency. Coaching is recommended.) |
<p>|                   |                                                                                          | 3/5 criteria are met | Far from Proficient  |
|                   |                                                                                          |             | (Follow-up training and coaching are critical.) |
|                   |                                                                                          |             | Fewer than 3/5 criteria are met |</p>

| 1 Educators develop and maintain coaching relationships | Meet 5/5 criteria for developing and maintaining coaching relationships  
- Create reciprocal partnerships  
- Communicate about coaching purpose and practices  
- Allow teachers to identify needs and to choose coaching support  
- Acknowledge and address differences  
- Build teacher leadership capacity | Meet 4/5 criteria | Meet 3/5 criteria | Fewer than 3/5 criteria |
| 2 Educators provide effective feedback | Effective feedback provided by educators meets 6/6 criteria  
- Provide informal positive feedback immediately after the session  
- Use specific, descriptive, and actionable verbal feedback  
- Use specific, descriptive, and actionable written feedback  
- Start with positive feedback focusing on specific examples that indicate strengths of practice  
- Reaffirm the positive and then mutually address growth elements with specific language and examples  
- Celebrate growth within the practices | Meet 5/6 criteria | Meet 4/6 criteria | Fewer than 4/6 criteria |
| 3 Educators develop a strategic and differentiated coaching plan | Coaching plans developed by educator meet 5/5 criteria  
- Align coaching plan focus to school building/district vision and goals  
- Support educators in self-assessment using the Practice Profile of the effective educational practice(s)  
- Support educators in development of growth goal  
- Establish methods of data collection for indicators of progress  
- Share a plan for gradual release of responsibility | Meet 4/5 criteria | Meet 3/5 criteria | Fewer than 3/5 criteria |
### Support

## Collective Teacher Efficacy (CTE) Practice Profile

<table>
<thead>
<tr>
<th>Essential Function</th>
<th>Exemplary Implementation</th>
<th>Proficient</th>
<th>Close to Proficient</th>
<th>Far from Proficient</th>
</tr>
</thead>
</table>
| 1. District/Building leaders provide opportunities for teachers to experience the **four sources of efficacy**, and teachers have a combined belief that they have a major impact on student learning | 85% of teachers report that within the last 12 months, they have met 5 criteria for efficacy  
- They have successfully implemented a new instructional strategy or practice learned in training (affective state)  
- They have received feedback and encouragement regarding the implementation of an instructional strategy or practice learned in training (social persuasion)  
- They have seen others in their building implement a new instructional strategy or practice learned in training (vicarious experience)  
- They have collected informal or formal data to indicate they have successfully implemented a new instructional strategy or practice learned in training (mastery experience)  
- They report they have the resources and support needed to make a major impact on student learning | 70% of teachers report that within the last 12 months they have met 5 criteria | 50% of teachers report that within the last 12 months they have met 5 criteria | Fewer than 50% of teachers report that within the last 12 months they have met 5 criteria |
| 2. District/Building leaders provide opportunities for teacher collaboration that encourages the development of **social networks** focused on improving instructional practice | 85% of teachers report having met 4 criteria  
- They participate in conversations with other teachers about ways to improve instruction 3 or more times per week  
- Their collaborative conversations with other teachers are helpful for improving instructional practice  
- They are part of formal and informal collaborative social networks  
- They experience shared leadership within teams | 70% of teachers report having met 4 criteria | 50% of teachers report having met 4 criteria | Fewer than 50% of teachers report having met 4 criteria |
| 3 | District/Building leaders design school structures, promote professional development, and allot time in ways that support the development of teacher leadership | 85% of teachers participate in school leadership opportunities through the following.  
- Work focused on school and/or district improvement  
- Professional development provided by themselves and/or colleagues  
- Work focused on strengthening school and/or district curriculum  
- Opportunities to participate in professional organizations  
- Work focused on family/community partnerships | 70% of teachers participate in school leadership opportunities through 5 criteria | 50% of teachers participate in school leadership opportunities through 5 criteria | Fewer than 50% of teachers participate in school leadership opportunities through 5 criteria |
|---|---|---|---|---|---|
| 4 | District/Building leaders establish a climate that values teacher voice in decision making | Regarding major decisions in their school, 85% of teachers report the following 5 criteria occur.  
- the decision making process is transparent  
- the decision making process includes opportunities for teachers to share their ideas and expertise  
- they believe they had an influential voice in decisions  
- they trust those in the decision making role  
- a collaborative problem-solving approach is used to generate ideas/solutions | Regarding major decisions in their school, 70% of teachers report the 5 criteria | Regarding major decisions in their school, 50% of teachers report the 5 criteria | Regarding major decisions in their school, fewer than 50% of teachers report the 5 criteria |
| 5 | District/Building leaders design intentional supports that promote collaborative teacher inquiry | 85% of teachers participate in collaborative inquiry that includes the following 6 criteria.  
- Has a formal structure (meeting times, teams, and process are defined)  
- Builds consensus around compelling problems of instruction  
- Involves collaborative collection and analysis of data relevant to the identified problem of instruction  
- Results in collective commitment to a plan to address student needs  
- Results in evaluation of the plan and further adjustments  
- Improves teachers’ understanding and teaching practices | 70% of teachers participate in collaborative inquiry that includes the 6 criteria | 50% of teachers participate in collaborative inquiry that includes the 6 criteria | Fewer than 50% of teachers participate in collaborative inquiry that includes the 6 criteria |
**Practice Profile**

**Leadership for Effective Implementation of District-Wide Evidence-Based Practices**

<table>

<th>Proficient</th>
<th>Close to Proficient</th>
<th>Far from Proficient</th>
</tr>
</thead>
</table>
| **1** | Leadership develops, aligns, and monitors a system-wide plan for implementation focusing on impact within a cycle of continuous improvement. | There is a system-wide plan for continuous improvement that includes all of the criteria below.  
- Alignment with district-wide initiatives  
- A district-wide common focus with specific and attainable goals  
- Building goals aligned with the district-wide common focus  
- A mechanism for feedback from all levels  
- A year-long district-wide professional learning structure that is practice specific  
- A process for the collection of multiple sources of data to inform progress toward district and building performance goals  
- A schedule for the analysis of key performance indicators at all administrative/educator levels for the purpose of monitoring impact  
- Specific practice-based strategies focused on increasing the impact that teachers are having on students collectively across the district | Meet 5/8 of the criteria for a system-wide plan for continuous improvement and  
Leadership Teams regularly engage in formal problem-solving using district/building level data. | Meet 4/8 of the criteria for a system-wide plan for continuous improvement and/or do not have Leadership Teams regularly engage in formal problem-solving using district/building level data. | Fewer than 4/8 criteria for a system-wide plan for continuous improvement are met and/or do not have Leadership Teams regularly engage in formal problem-solving using district/building level data. |
Leadership establishes a sustainable school improvement approach that includes all of the criteria below.

- A high-quality District Leadership Team as evidenced through member roles, team function, and records of meetings
- Building Leadership Teams as evidenced through member roles, team function, and records of meetings
- Collaborative Team structures that distribute responsibility resulting in all educators (administrators and teachers) assuming collective responsibility for the well-being of the student population
- A process for aligning and monitoring performance goals throughout the district both across buildings and instructional levels, as well as within buildings and grade levels
- A communication plan that provides information and data on a formal and frequent basis to communicate with district, building, and community collaborators
- A district-wide open communication network that supports dialogue and discussion across the district about teaching and the recognition/identification of high impact practices

| 2 | Leadership sets a path for continuous improvement that is data informed and occurs within a collaborative school culture. | Meets the first 4/6 criteria | Meets 3/6 criteria | Fewer than 3 criteria are met |
## Practice Profile

### Leadership for Effective Implementation of District-Wide Evidence-Based Practices (cont.)

| 3                  | **Leadership models and facilitates qualities of trust and growth mindset as key to a culture of continuous improvement.** | A. Leadership builds an organizational culture of trust that leads to all of the criteria below.  
- Belief by teachers that the leadership’s actions are consistent with shared values  
- Belief by teachers that the leadership follows through on commitments  
- Belief by teachers that the leadership values all staff  
- Belief by teachers that they have the ability to positively affect student learning  
B. Leadership promotes and models a growth mindset by meeting all of the criteria below.  
- Setting both long- and short-term organizational goals  
- Seeking teacher feedback and input regularly  
- Providing teachers with constructive, detailed feedback  
- Creating opportunities for teachers to observe each other’s classes to learn from one another  
- Discussing both successes and failures with teachers as opportunities for learning  
- Valuing effort as the path to mastery | Meets 3/4 criteria for A and 4/6 criteria for B are met | Meets 2/4 criteria for A and 3/6 criteria for B are met | Meets fewer than 2 criteria for A and fewer than 3/6 criteria for B are met |
Leadership empowers educators at all levels to active engagement in continuous improvement and collective responsibility for student growth.

</thead>
</table>
| 2 District leaders demonstrate commitment to school improvement through participation in coaching, training, and data-driven action to improve instructional practice. | An action plan with implementation timeline, aligned with existing Comprehensive School Improvement Plan (CSIP) and district professional development plan, is developed and used. This action plan addresses all items listed as proficient. Progress on the action plan is monitoring monthly by the DLT. Based on progress monitoring, modifications to the action plan are collaboratively identified by the DLT and communicated across the district. | An action plan with implementation timeline, aligned with existing Comprehensive School Improvement Plan (CSIP) and district professional development plan, is developed and used. This action plan has the following features.  
• Is informed by implementation and outcome data (e.g., SAPP, CWIS)  
• Provides for training and coaching on effective teaching and learning practices  
• Creates structures and processes for collaborative problem-solving using data  
• Creates structures and processes for school-based coaching  
• Incorporates virtual coaching and technology to enhance quality and timeliness of coaching  
• Includes annual benchmarks and outcomes aligning areas of foci across district priorities  
• Builds in opportunities for progress monitoring and revisiting action plan annually  
This plan contains the following.  
• Prioritized goals  
• Annual measurable goals and outcomes matched to data sources  
• Identified data elements (e.g., CWIS, SAPP), which are reviewed at least annually for data-driven discussions | An action plan with implementation timeline is developed; however, there are gaps in recommended items, data, and review processes as listed in the proficient column. Of the 10 recommendations listed, at least 6 are addressed fully. | An action plan does not exist OR fewer than 6 items are addressed fully. |
<table>
<thead>
<tr>
<th>Essential Function</th>

<th>Far from Proficient</th>
</tr>
</thead>
</table>
| 3 District leaders review district-level and building-level instruction and learning outcomes data and provide support based on data. | A system for supporting and monitoring fidelity and implementation of progress is established, used, and revisited annually. This system includes a data review cycle consisting of items listed as proficient. Based on implementation of the data review cycle, district leaders receive professional development (or refresher professional development) to maintain proficient implementation of the data elements and the review cycle. | A system for supporting and monitoring fidelity and implementation of progress is established, used, and revisited annually. This system includes a data review cycle which promotes the following actions.  
- Determine district-wide and building-level status and needs for professional development using CWIS, SAPP, and other data  
- Determine focus areas of need and set benchmarks for improvement  
- Provide for training and coaching (including use of the virtual learning platform) to address needs for improved instruction and build on strengths  
- Provide opportunity for educator reflection on the acquisition and application of new instructional knowledge and skills  
- Monitor implementation through observations and walkthroughs  
- Provide educators with descriptive feedback and support for improvement  
- Review school-wide data and identify ways of continuing to improve instruction and outcomes  
- Share data and collaborate with building leaders  
- Use data at all levels to guide professional development | The district engages in a data review cycle; however, there are missing steps or minimal levels of implementation. Of the 9 recommended steps listed, at least five are addressed fully. | The district does not conduct a data review cycle OR fewer than 5 items are addressed fully. |
| 4 District leaders align expectations and requirements across the district in order to improve efficiency, consistency, and effectiveness of instruction. | The DLT uses an established protocol for review of all district work, initiatives, and programs to assure current and ongoing alignment with the district CSIP. The protocol consists of all items indicated as proficient. Review of the protocol, informed by data, occurs at least twice annually. Detailed notes of the review are taken and used to inform modifications to the CSIP. | The DLT uses an established a protocol for review of all district work, initiatives, and programs to assure current and ongoing alignment with the district CSIP. The protocol consists of the following.  
- A schedule of taking inventory of all district initiatives in a manner that identifies redundancies and inconsistencies  
- A process for assuring alignment as new initiatives or programs are added to district/building expectations  
Persons designated with responsibility for following the protocol and communicating to district/building leaders how alignment can/should occur. | The DLT has established a protocol addressing all recommended items; however not all recommendations are implemented. | The DLT has an established protocol; but it does not contain all recommended items OR a protocol has not been established. |
### Implementation Checklist: District-Level

**Directions:** The Implementation Checklist should be completed collaboratively by the District Leadership Team and CST Facilitator.

<table>
<thead>

<tr>
<td><strong>Is the item a focus for the current year?</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Essential Function 1: Leadership**

**Form District Leadership Team (DLT) (see Blueprint for recommended composition):**

- Has the District Leadership Team been established?
- Are there new DLT members this year?
- Have they received professional development about district-level implementation and district-level roles?
- Is the DLT comprised of members with expertise in the following areas: Instruction, curriculum, assessment, technology, special education, pre-K, elementary, middle, and high school?
- Does the DLT meet monthly to collaborate and shape participation in DCI?

**Designate district-level contact person**

- Who is the district-level DCI contact person?
- Is there a new district-level contact person this year?
- Does the DLT point person regularly communicate with the Coaching Support Team (CST) facilitator?

**Designate building-level contact person (for each building in district) who will disseminate information to faculty and staff in the building:**

- Have communication protocols been developed to produce consistent understanding of participation in all buildings in the district?
- Who are the building-level contacts?
- Can the building level contacts accurately describe how the district participates in DCI?

Glossary of Terms

**Action Plan:** A plan created to organize a district and/or school improvement process is an *action plan*. The plan should include details of scope, sequence, timeline, and designated responsibility. Progress toward accomplishing action plan items should be reviewed and revised on an ongoing basis.

**Alignment:** Being purposeful about developing and implementing a process of examining commonalities and efficiencies across educational components (e.g., initiatives, assessment, and curriculum) is *alignment*.

**Artifacts:** Various types of documents, records, notes, and data used when evaluating effectiveness or documenting evidence of implementation are *artifacts*.

**Assessment and Reflection:** A key Professional Learning Module component that provides learners with opportunities to reflect on their learning and potential implementation challenges is the stage of *assessment and reflection*.

**Assessment Capable Learners:** Referred to in Dr. Hattie’s (2008) research as “student self-report grades,” *assessment capable learners* are students who know the learning target, can describe their level of learning in relation to the learning target, and describe their next steps.

**Blueprint:** A blueprint is a detailed plan of action. The *DCI Blueprint* describes an approach and processes for implementing effective educational practices in Missouri districts and schools.

**Cadre:** A *cadre* is a small group of people specially trained for a particular purpose or profession. In the context of DCI, small groups of participating districts are trained and coached by their Coaching Support Team to increase district capacity across each of the districts in the cadre.

**Cause Data:** Data measuring variables within the system or implementation process that may affect the desired outcome (e.g., implementation fidelity, type of professional development, or analysis of competing initiatives) is referred to as *cause data*.

**Coaching Support Teams (CST):** In the context of DCI, a CST is a team comprised of professionals who hold identified expertise in leadership and school structure, academic, social/behavioral, special education, data, technology, assessment, accountability, and systems change. CSTs work closely with District Leadership Teams to support and increase district capacity in implementation and sustainability of evidence-based educational practices.

**Coaching:** *Coaching* is an aspect of professional development focused on improving practice in the applied context. Coaching is a learning relationship in which guided reflection, modeling, guided practice, and learning strategies for improvement occur.

**Collaborative Teams:** As a foundational piece of the DCI Framework, *Collaborative Teams* (a) maintain structures/processes for efficient collaboration and (b) intentionally review data, analyze, and discuss the impact of educational practices on student learning.
**Common Formative Assessment:** As a foundational piece of the DCI Framework, *Common Formative Assessment* is systematic and cyclical process designed to provide timely teacher/student feedback on curricula and student learning to improve both instructional practices and academic achievement.

**Competency Drivers:** Competencies of key personnel who have direct and supportive roles are essential for effective implementation. The *competency drivers* include selection, training, coaching, and fidelity/performance assessment.

**Data-Based Decision Making:** As a team process, *Data-Based Decision Making* occurs when teams (a) disaggregate data, (b) analyze student performance, (c) set incremental student learning goals, (d) discuss the relationship between instruction and student learning, and (e) identify effective key teaching and learning practices to implement.

**District Continuous Improvement (DCI):** *District Continuous Improvement* is informed by the prior implementation of Missouri Model Districts. Using a district-level approach, the goal of District Continuous Improvement is to implement an integrated framework of effective academic and behavioral practices designed for achieving exceptional student outcomes. The DCI Framework and available implementation supports are outlined in this Blueprint.

**District Leadership Team:** A *District Leadership Team* is comprised of district-level administrators, districtwide coaches, curriculum and assessment leaders, professional development coordinators, and other instruction and administrative leaders.

**Effect Data:** The measurement of the desired outcome (e.g., student learning or behavior) is referred to as *effect data* in the Data-Based Decision Making Cycle.

**Effect Size:** Quantifying the difference between two groups or the same group over time, on a common scale is *effect size*.

**Effective Teaching and Learning Practices:** Within the DCI Framework and Practices, *effective teaching and learning practices*, demonstrated through research, result in improved student learning. In order to maximize outcomes, the practices should be implemented with fidelity across content areas.

**Essential Functions:** Sometimes called core components, active ingredients, or practice elements, *Essential Functions* when used in a practice-profile format, provide a clear description of the features that must be present to say that an innovation is being used to achieve outcomes. Essential Functions guide practitioner decisions and ensure consistency, integrity, and sustainable effort across practitioners.

**Essential Questions:** *Essential questions* are a component of a learning module. These questions provoke deep thought, lively discussion, sustained inquiry, and additional questions leading to new and/or deep insights.

**Every Student Succeeds Act (ESSA):** *ESSA* is designed to ensure that all students have a significant opportunity to a fair and equitable high-quality education. Focus is also on closing the educational achievement gaps.
Support

**Facilitative Administration:** As one of four organization drivers, educational leadership provide *facilitative administration* when they collaborate with their teams to identify and address challenges, form clear communication protocols and feedback loops, develop and adjust policies and procedures, and reduce system barriers to implementing the program as intended.

**Feedback:** *Feedback* is defined as information provided by an agent (e.g., teacher, peer, book, parent, self, experience) regarding aspects of one’s performance or understanding.

**Fidelity/Performance Assessment:** As one of four competency drivers, *fidelity and performance assessment* is a process or tool used to determine the extent to which a program is implemented as intended and achieving intended student achievement outcomes.

**Fidelity:** *Fidelity* is the degree to which a program as implemented corresponds with the program as described.

**Foundations:** The DCI Framework references three educational practices as *foundations:* Collaborative Teams, Data-Based Decision Making, and Common Formative Assessment.

**Implementation:** *Implementation* is putting into place a specified set of activities, protocols, and structures designed to address a gap or area of need.

**Implementation Drivers:** *Implementation drivers* are based on the commonalities among successfully implemented practices and programs found in the literature and derived from current best practices.

**Implementation Science:** *Implementation science* is the study of factors that influence the full and effective use of innovations in practice.

**Implementation Specialist:** New this year is the role of an *Implementation Specialist,* who will focus on on-boarding districts new to DCI. The Implementation Specialist will provide initial and early contact with districts to introduce DCI, including scope of work and systems needed for implementation. After on-boarding, the Facilitator and CST will begin working closely with districts.

**Implementation Stages:** The implementation process has six developmental *implementation stages:* Adoption, Program Installation, Initial Implementation, Full Operation, Innovation, and Sustainability. The Adoption Stage includes taking inventory, looking at the reality, setting priorities, and master planning. An environment supportive of implementation is established at the district and building levels in the Program Installation Stage. During Initial Implementation, teams begin putting the practice into place and monitoring early steps. Full Operation involves taking implementation to scale. At a district-level, full implementation occurs when all school buildings in the district are implementing the DCI Framework. During Innovation, the model has been fully implemented and sufficient data has been gathered. Once data is analyzed and interpreted, innovative modifications, additions and subtractions are made to the model. The final stage of implementation is Sustainability. The ultimate goal is a sustainable model of services and supports that provides a valid, reliable, and evidence-based approach to responding to the educational needs of all students by developing the capacity to maintain lessons learned from DCI.
**Implementation Survey:** Participating districts will use the Collaborative Work Implementation Survey, a 24-item instrument designed using a five-point Likert scale intended to measure the degree of implementation of desired processes and practices within Missouri school buildings active in the Collaborative Work. The five domains are effective teaching and learning practices, common formative assessments, data-based decision making, leadership, and professional development.

**Implementation Team:** Implementation teams actively support implementation of a new program or innovation and provide an internal support structure to move selected programs and innovations through the stages of implementation.

**Implementation Zones:** Implementation Zones (IZs) are a data-driven approach to describing district- and building-level implementation processes and outcomes. A district will be placed in one of four Implementation Zones. The Early Implementation zones includes districts beginning DCI. The Developing Zone includes districts putting elements of the DCI Framework into place and starting to see evidence of effective implementation. The Initial Implementation Zone includes districts implementing all pieces of the DCI Framework to some, and possibly varying, extent across the district. The Full Implementation Zone includes districts showing initial evidence of sustaining effective practices. Anticipated for the 2021-2022 school year will be the addition of the Initial Sustaining Zone for districts showing sustained implementation of effective practices across multiple years.

**Instructional Leader:** Instructional leaders have a student focus and are concerned with the teachers’ and school’s impact on student learning and instructional issues. Instructional leaders conduct classroom observations, ensure professional development enhances student learning, communicate high academic standards, and ensure all school environments are conducive to learning.

**Leadership:** As one of four organization drivers, effective educational leaders know how to build and strengthen a network of organizational support that includes (a) the professional capacity of teachers and staff, (b) the professional community in which they learn and work, (c) family and community engagement, and (d) effective management and operations of the school/district.

**Learning Intentions:** Learning intentions, are also known as learning objectives, clearly describe what students should know, understand, and do.

**Look-Fors:** Look-fors are indicators in student work that demonstrate changes in proficiency.

**Metacognition:** Metacognition occurs when a student is conscious of his/her thinking and level of cognition while in the process of learning.

**Missouri Model Districts (MMD):** District Continuous Improvement is informed by the prior implementation of Missouri Model Districts. Using a district-level approach, the goal of District Continuous Improvement Framework is to implement effective academic and behavioral practices designed for achieving exceptional student outcomes. The DCI Framework and available implementation supports are outlined in this Blueprint.
Support

**Opening and Introductions:** *Opening and introductions* are a key learning package component in which educator-learners receive an overview of the day, including learner objectives outcomes, and essential questions.

**Organization Drivers:** *Organization drivers* represent the group of factors that form the supports and structures essential for (a) keeping implementation processes on track, (b) evaluating drift in implementation through data, and (c) determining adjustments to implementation as needed. The organization drivers are data-support data systems, facilitative administration, systems interventions, and leadership.

**Practice Profile:** A *Practice Profile* is a framework developed by the National Implementation Research Network (NIRN) as a way of outlining criteria using a rubric structure with clearly defined practice-level characteristics.

**Preparation:** *Preparation* is a key learning module component that provides opportunities for learners to engage in content prior to the formal training.

**Professional Learning Module:** A *Professional Learning Module* is a focused approach to professional development content that (a) addresses adult learning principles and (b) upholds specific characteristics of high quality professional development and (c) focuses on implementation at the classroom level.

**Protocols:** *Protocols* within Collaborative Teams consist of agreed upon guidelines/norms for conversation and a structure that permits focused conversations to occur. Protocols are used to look at student and adult work, give feedback, solve problems or dilemmas, observe classrooms or peers, advance problem-solve on a specific issue, and structure a discussion around a text.

**Regional Professional Development Center (RPDC):** The nine Regional Professional Development Centers (RPDCs) continue to be a resource for addressing training needs.

**Results Indicators:** *Results indicators* facilitate the planning for, sustaining, or revising of strategies/practices, and also allow teachers to monitor progress of implementation and effectiveness of these strategies/practices.

**Rubric:** A *rubric* is a criterion-based tool used to communicate expectations of proficiency and to assess a student’s demonstrated level of performance, understanding, or knowledge around the defined criteria.

**Scaling-Up:** *Scaling-up* is the process of reaching larger numbers of students or education settings.

**School Building Leadership Team:** A *Building Leadership Team* is comprised of building-level administrators, teacher-leaders, instructional coaches, and other persons integral to the overall building-level system. This team supports building-level implementation and structures for moving through the implementation stages and assuring the implementation drivers are addressed.
**School-Based Implementation Coaching:** School-Based Implementation Coaching occurs when peer-to-peer coaching, focused on educational practices, is systematically used to support ongoing implementation and problem-solve implementation challenges.

**Self-Assessment Practice Profile:** The Self-Assessment Practice Profile is an online tool for team-based analysis of Practice Profiles. Through this tool, individual educators as well as teams of educators complete a questionnaire aligned to items on Practice Profiles. Once complete, Administrators create reports to view implementation of practices across a team, grade level, or other administrator-determined group of educators.

**Success Criteria:** Success criteria describes student outcomes and expectations.

**Systems Interventions:** As one of four organization drivers, systems interventions are the ways of aligning resources, expectations, and system supports to support implementation.

**Topic in Action:** Topic in action is a key learning module component where learners explore ways to incorporate new knowledge and skills into their teaching.

**Topic in Practice:** Topic in practice is a key learning module component that provides opportunities for learners to discuss what application in the classroom looks like.

**Training:** As a component of professional development, training provides for the introduction of new practices, exploration of applications in real world settings, and experimentation with application scenarios under the guidance of an expert.

**Unpacking the Topic:** Unpacking the topic is a key learning module component that explores core components and implementation steps.

**Visible Learning:** Coined by John Hattie, visible learning is an enhanced role for teachers as they become evaluators of their own teaching. Visible refers to making student learning visible to teachers, ensuring attributes that make a “visible” difference to student learning. Learning refers to how we go about knowing and understanding then doing something about student “learning.”
